## Daniel R. Finger, LLC, Physical Security Consultant

Today's society is not only becoming more complex, it has also become more violent while the tolerance of criminal activity has risen. This translates to crimes on your property and the potential liability whether valid or not. For a facility owner's peace-of-mind, a safe and well-designed facility is critical, whether building a new construction or evaluating an existing one. In order to accomplish a safety and protection program for any facility, a clear understanding of risks and security must be assessed.

Daniel R. Finger, LLC will provide a physical security, and risk analysis and assessment of your facility and its operations, with respect to people and property, so that problems and vulnerabilities can be identified and prioritized so that corrections can be made; risks can be minimized; and liability mitigated and future exposure reduced or prevented. Ultimately the goal is to provide a secure and safe environment for clients, patrons and employees.

Daniel R. Finger, LLC will integrate all aspects of physical security, and risk analysis assessment when conducting a physical security risk assessment audit for your facility.

These security audits and areas to be examined would include but are not limited to:

- [Physical Security Survey](#)
- [Determine Effectiveness of Management Plans](#)
- [Training Issues for Security and Non-security Personnel](#)
- [Project Management](#)
- [Determine Areas of Vulnerabilities](#)

[Contact Daniel R. Finger](#) today for more information about Site Security, Risk Assessment and Management Programs or to have a Security Audit assessed for your facility.
